

EXHIBIT A

MIRROR SYSTEMS

July 9, 2008

To whom it may concern:

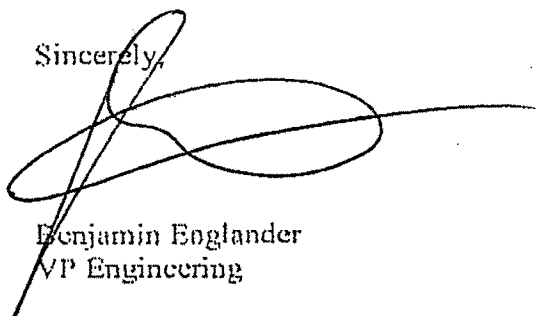

I am Vice President of Engineering for Rosco, Inc., the assignee of this patent application, as well as the inventor of this application.

Rosco sells cross view mirrors with and without anti-glare tint on the upper area of the mirror. Examples of a Rosco cross view mirror that does not include a tint is Rosco's standard Hawkeye mirrors, part numbers 2365 and 3365. Examples of Rosco's mirrors that include an anti-glare tint in the upper area are Rosco's tinted Hawkeye mirrors, part numbers 2365T and 3365T.

Rosco has sold tens of thousands of the Rosco cross view mirrors that have the anti-glare tint under Rosco mirror Hawkeye part number 3365T. It is my understanding that almost every one of these mirrors that we have sold has been installed on our customers' buses and are in use. I personally have installed many of these mirrors at various customers' facilities during demonstrations and I have personally seen these mirrors in use by Rosco's customers throughout North America.

The Rosco mirrors with the anti-glare tint are significantly superior to the mirrors that do not contain the tint, and several of Rosco's customers have purchased the Rosco mirrors with the anti-glare tint specifically because of this feature. Even though the Rosco mirrors with anti-glare tint cost more than the Rosco mirrors without the anti-glare tint, Rosco has nevertheless sold tens of thousands of the mirrors with the anti glare tint for their improved performance, i.e., the mirror's ability to reduce glare emanating from sun rays in front of the driver.

Sincerely,

Benjamin Englander
VP Engineering
